Vectors and the Geometry of Space 12.1 Three-Dimensional Coordinate Systems

B. Farman

Mathematics and Statistics Louisiana Tech University

Calculus III

◆□▶ ◆□▶ ◆注▶ ◆注▶ 注 のへで

Definition (Rectangular Coordinates)

The set

$$\mathbb{R}^3 = \{(x, y, z) \mid x, y, z \in \mathbb{R}\}$$

is called the three-dimensional rectangular coordinate system.

・ロト ・ 同ト ・ ヨト ・ ヨト

Definition (Rectangular Coordinates)

The set

$$\mathbb{R}^3 = \{(x, y, z) \mid x, y, z \in \mathbb{R}\}$$

is called the **three-dimensional rectangular coordinate system**. We call the marked point (0, 0, 0) the **origin**, *O*.

・ロト ・ 同ト ・ ヨト ・ ヨト

イロト イヨト イヨト イ

イロト イヨト イヨト イヨ

In two dimensions, a single equation in the variables x and y defines a curve.

æ

・ロト ・四ト ・ヨト ・ヨト

In two dimensions, a single equation in the variables x and y defines a curve.

・ロト ・ 同ト ・ ヨト ・ ヨト

э

In three dimensions, a single equation in the variables x, y, and z defines a surface.

Exercise

What surface in \mathbb{R}^3 is represented by the equation z = 3?

・ロト ・ 同ト ・ ヨト ・ ヨト

Solution

The equation z = 3 represents a plane parallel to the *xy*-plane.

<ロト <回ト < 注ト < 注ト

Exercise

What surface in \mathbb{R}^3 is represented by the equation y = 5?

э

・ロト ・四ト ・ヨト ・ヨト

Solution

The equation y = 5 represents a plane parallel to the *xz*-plane.

<ロト <回ト < 注ト < 注ト

Exercise

Describe the points in \mathbb{R}^3 that satisfy \boldsymbol{both}

$$x^2 + y^2 = 1$$
 and $z = 3$.

æ

・ロト ・四ト ・モト ・モト

Solution

The points that satisfy $x^2 + y^2 = 1$ form a cylinder of radius 1 centered at the *z*-axis. The points that also satisfy z = 3 form a circular cross section of the cylinder, 3 units above the *xy*-plane.

Exercise

Sketch the surface in \mathbb{R}^3 represented by the equation y = x.

э

・ロト ・四ト ・ヨト ・ヨト

Surfaces and Solids

Solution

The equation y = x is a plane that passes through the *z*-axis at a 45 degree angle.

Suppose we wish to find the distance between the origin, O, and a point P with coordinates (a, b, c).

・ロト ・日 ・ ・ ヨト ・

First, let's recall the distance in the plane.

æ

イロト イヨト イヨト イヨト

First, let's recall the distance in the plane.

• The distance in the plane between the origin and the point (a, b) is $d = \sqrt{a^2 + b^2}$.

э

ヘロア 人間 アメヨアメヨア

First, let's recall the distance in the plane.

- The distance in the plane between the origin and the point (a, b) is $d = \sqrt{a^2 + b^2}$.
- The distance formula is a consequence of the Pythagorean Theorem.

æ

・ロト ・四ト ・ヨト ・ヨト

Definition

To simplify our problem, it is useful to introduce a new concept.

Consider a point, P, with coordinates (a, b, c).

Definition Consider a point, P, with coordinates (a, b, c).

▶ The **projection of** *P* **onto the** *xy***-plane** is the point (*a*, *b*, 0).

Definition Consider a point, P, with coordinates (a, b, c). The projection of P onto the xy-plane is the point (a, b, 0). The projection of P onto the xz-plane is the point (a, 0, c).

Definition

Consider a point, P, with coordinates (a, b, c).

- ▶ The **projection of** *P* **onto the** *xy***-plane** is the point (*a*, *b*, 0).
- ▶ The projection of *P* onto the *xz*-plane is the point (*a*, 0, *c*).
- The projection of *P* onto the *yz*-plane is the point (0, b, c).

The projections of P on the xy-, xz-, and yz-planes.

イロト イヨト イヨト イ

We form a right triangle using the origin, the point P, and the projection onto the xy-plane.

We form a right triangle using the origin, the point P, and the projection onto the xy-plane.

æ

<ロト <回ト < 注ト < 注ト

• The length of the bottom is $A = \sqrt{a^2 + b^2}$.

<ロト <回ト < 注ト < 注ト

- The length of the bottom is $A = \sqrt{a^2 + b^2}$.
- The length of the side is B = c.

- The length of the bottom is $A = \sqrt{a^2 + b^2}$.
- The length of the side is B = c.
- ▶ The distance from *O* to *P* is

$$D = \sqrt{A^2 + B^2} = \sqrt{a^2 + b^2 + c^2}.$$

We extend the formula for distance between the origin and a point to the distance between two arbitrary points as follows.

ヘロト ヘロト ヘビト ヘビト

We extend the formula for distance between the origin and a point to the distance between two arbitrary points as follows.

The distance between two points (x₀, y₀) and (x₁, y₁) in the plane is

$$\sqrt{(x_0-x_1)^2+(y_0-y_1)^2}$$

We extend the formula for distance between the origin and a point to the distance between two arbitrary points as follows.

The distance between two points (x₀, y₀) and (x₁, y₁) in the plane is

$$\sqrt{(x_0-x_1)^2+(y_0-y_1)^2}.$$

The distance between two points (x₀, y₀, z₀) and (x₁, y₁, z₁) in space is

$$\sqrt{(x_0-x_1)^2+(y_0-y_1)^2+(z_0-z_1)^2}.$$

Theorem (Distance Formula in Three Dimensions)

The distance between two points (x_0, y_0, z_0) and (x_1, y_1, z_1) in space is

$$\sqrt{(x_0-x_1)^2+(y_0-y_1)^2+(z_0-z_1)^2}.$$

Exercise

Find the distance from the point (2, -1, 7) to the point (1, -3, 5).

Solution

The distance between (2, -1, 7) and (1, -3, 5) is

$$\sqrt{(2-1)^2 + (-1 - (-3))^2 + (7-5)^2} = \sqrt{(-1)^2 + 2^2 + 2^2}$$
$$= \sqrt{1+4+4}$$
$$= \sqrt{9}$$
$$= 3$$

э

・ロト ・四ト ・モト ・モト

Definition (Sphere)

The sphere of radius r about (h, k, ℓ) consists of the points in \mathbb{R}^3 that are *exactly* r units from (h, k, ℓ) .

Theorem (Equation of a Sphere)

The sphere of radius r centered at (h, k, ℓ) consists of the solutions to the equation

$$(x-h)^2 + (y-k)^2 + (z-\ell)^2 = r^2$$

Exercise

Find an equation of the sphere with center (3, -1, 6) that passes through (5, 2, 3).

・ロト ・四ト ・ヨト ・ヨト

Solution

Using the Distance Formula in Three Dimensions and the Equation of a Sphere,

$$(x-3)^{2} + (y+1)^{2} + (z-6)^{2} = (3-5)^{2} + (-1-2)^{2} + (6-3)^{2}$$
$$= 2^{2} + (-3)^{2} + 3^{2}$$
$$= 4 + 9 + 9$$
$$= 22$$

Exercise

Show that

$$x^2 + y^2 + z^2 + 4x - 6y + 2z + 6 = 0$$

represents a sphere. Find its center and radius.

э

ヘロト 人間ト 人間ト 人間ト

Solution

Complete the square three times:

$$x^{2} + y^{2} + z^{2} + 4x - 6y + 2z = -6$$
$$(x^{2} + 4x + 4) + (y^{2} - 6y + 9) + (z^{2} + 2z + 1) = -6 + 4 + 9 + 1$$
$$(x + 2)^{2} + (y - 3)^{2} + (z + 1)^{2} = 8$$

The center is (-2, 3, -1) and the radius is $\sqrt{8} = 2\sqrt{2}$.

Exercise

What region in \mathbb{R}^3 satisfies

$$1 \le x^2 + y^2 + z^2 \le 4$$
 and $z \le 0$?

æ

・ロト ・四ト ・モト ・モト

Solution

This region represents a hemisphere of radius 4 with a hemisphere of radius 1 removed from it.

<ロト <回ト < 注ト < 注ト
